**HOME PNA TESTS PRODUCE CERTIFIED PRODUCTS
FOR END-TO-END DELIVERY OF IP SERVICES IN THE HOME**

**Actiontec, 2Wire, Cameo and Motorola plugfest certifications
raise total HomePNA certifications to 17 products, 8 reference designs**

SAN RAMON, Calif. – Sept. 12, 2007 – HomePNA today announced four new HomePNA 3.1 certified home networking products, providing for end-to-end delivery of Internet Protocol (IP) services over HomePNA within the home. Triple-play IP services include IPTV, Voice over Internet Protocol (VoIP), and data.

Actiontec and Cameo each certified Ethernet to HomePNA 3.1 bridges and 2Wire and Motorola certified residential gateways at HomePNA's summer plugfest, hosted by member Sunrise Telecom in San Jose, Calif.

Certified interoperable products assure service providers that the products they deploy comply with HomePNA requirements to provide reliable high-speed, multimedia home networking over phone wires and coaxial cables with guaranteed quality of service (QoS). HomePNA now has 17 certified products and eight certified reference designs from seven vendors.

“HomePNA's certified home network components earn credibility with service providers intent on capturing the nearly two-thirds of consumers who want to network their TVs with the Internet and other consumer devices, according to our recent report, ‘Home Networking: In Search of a Killer Connection,’” said Steve Rago, principal analyst, networking/optical communications for iSuppli. “Telcos must provide reliable, value-added multimedia IP services like IPTV to win subscribers from established cable and satellite television providers, differentiating their offerings with quality, features and cost-effective triple- or quad-play service packages for consumers.”

HomePNA certification is limited to HomePNA member products and reference designs. Products and reference designs were compliance tested and also interoperability tested both with a golden node and other members' products to earn HomePNA certification.

Certified products are listed and identified with a HomePNA logo at http://www.homepna.org/en/certification/member_products.asp.

About HomePNA

HomePNA is an incorporated, non-profit association of industry-leading companies working together to promote adoption of networking industry standards using existing home wiring. Members of HomePNA develop industry standards over both phone line and coaxial cables with the intent to rapidly bring to market a range of interoperable data and audio/video home networking solutions.

Founded in June 1998, HomePNA members represent cutting-edge international companies that span the networking, telecommunications, hardware, software and consumer electronics industries. For more information on HomePNA, visit www.homepna.org.
